Education

Memorial University of Newfoundland

September 2020 – May 2024

B.Sc in Computer Science(Smart Systems), Minor in Business

3.3 GPA

- **Coursework:** Data Structures and Algorithms, Front-end Development, Backend Development, Cloud Architecture, Artificial Intelligence and Machine Learning, Computer Vision, Neural Networks Architecture.

Experience

Software Engineer

June 2024 – September 2024

NutraForge Technologies Inc.

St. John's, NL

- Designed and delivered full-stack web features using React.js and JavaScript, translating product and stakeholder requirements into production-ready interfaces used by internal and external users.
- Led frontend architecture improvements in collaboration with the CEO and CTO that increased user engagement by 40% and reduced UI inconsistencies by 30%, improving usability and maintainability.
- Applied data-driven UX decisions and iterative feedback loops, resulting in a 78% increase in market recognition and 95% positive feedback in structured user testing.

Software Engineer

March 2024 - May 2024

School of Graduate Studies, Memorial University of Newfoundland

St. John's NL

- Built and optimized frontend systems using React.js, CSS, and Vite to support high-traffic academic workflows, increasing session duration by 35% and reducing bounce rate by 20%.
- Implemented modular, scalable component architecture that improved frontend performance by 18% and enabled seamless future CI/CD integration.
- Designed SEO-aware rendering and data flow strategies in collaboration with backend contributors, increasing organic traffic by 40% and search visibility by 30%.

Lead Software Engineer (BioInformatics)

August 2023 - February 2024

School of Pharmacy, Memorial University of Newfoundland

St. John's NL

- Developed a Python and Flask-based visualization platform for complex protein structure data, improving spatial accuracy by 40% over STRIDE and supporting 100+ active research projects.
- Designed and implemented data parsing pipelines for TXT, Word, and PDF inputs, reducing extraction time by 24% and improving downstream data reliability.
- Led a team of 4 developers, owning architecture decisions, code reviews, and testing strategy, achieving 95% unit test coverage and reducing development time by 25%.

Projects

GeoAnalyzer

<https://geoanalyzer-rho.vercel.app/> 📄

- Designed and developed an interactive browser-based 3D engineering review platform using React.js and TypeScript, enabling real-time inspection, manipulation, and visualization of complex 3D models within a high-performance WebGL environment.
- Implemented spatial analysis tools including distance and angle measurements using 3D vector mathematics, allowing users to analyze geometry directly within the scene through intuitive point-based interactions.
- Built a contextual commenting system that allows threaded annotations to be placed directly on model surfaces, supporting collaborative review workflows and structured feedback during design evaluation.
- **Technologies applied:** React.js, TypeScript, Three.js, React Three Fiber, Drei, WebGL, Vite.

Certifications

AWS Certified Cloud Practitioner

May 2025

- *Certification Badge* 📄

Skills

Java, Python, JavaScript, TypeScript, React.js, Three.js, React Three Fiber, HTML5, CSS3, Vite, WebGL, complex UI systems, frontend architecture, React state management, rendering performance optimization, interactive 3D & data visualization, REST API design, API versioning, Flask, FastAPI, Spring Boot, AWS (Lambda, DynamoDB, S3, Cognito, API Gateway, RDS, EC2), CI/CD pipelines, unit and integration testing, Git, Agile/Scrum, data structures and algorithms, system design, cross-functional collaboration
